JFYNetWorks helps young people build the skills to create their own opportunities.

Online tools and hands-on support lead to college readiness.

**Improving College Readiness**

College is now the threshold of employability. Within this decade, 72% of jobs in Massachusetts will require some college education. A college degree is no longer optional; it is an economic necessity. But too many of our high school graduates are not prepared for college-level work and do not graduate. JFYNet's College Readiness program prepares students for college work by using the Accuplacer diagnostic and placement tests to assess academic needs and prescribe individualized instructional programs to meet those needs. JFYNet Accuplacer Prep has helped students reduce the need for remedial college courses by 50%.

**Closing Achievement Gaps**

American students are not achieving up to their potential or up to the demands of global competition. Our high school students, especially low income and minority students, place low on international tests of math and reading and fall short of college entrance requirements. As a result, American employers cannot find the skilled workers they need to compete in the global economy. JFYNet's student-centered blended learning programs close these gaps and help all students raise their achievement levels.

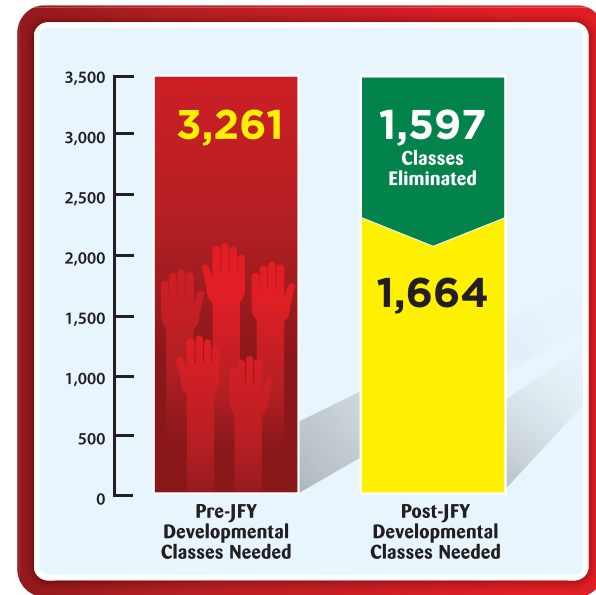

**Blended Learning: AIM<sup>2</sup>**

Blended Learning is the fusion of online and teacher-led instruction. It selects and organizes the vast resources of the internet into customized instructional units and places them in the skilled hands of the classroom teacher. Blended learning is the tool that enables teachers to practice student-centered instruction. Our approach to blended learning is described by the acronym AIM<sup>2</sup> : Assess, Instruct, Measure and Manage.

JFYNet Accuplacer Prep  
1,597 Courses Eliminated

**\$856,907 Saved**

*"Taking the Accuplacer here was much better than going to my college and taking the test. It was less stressful. It was nice to study before you take it, and nice to know that you can try it again."* (Student)

*"The program helps you where you are and helps you know where you need to study more."* (Student)

*"Every student who participated in the program showed improvement and authentic achievement. The self-paced, individualized tutorials assured that every student could succeed. Their success was manifold: not just a passing grade or credit toward a high school diploma, but the elimination of remedial courses at the college level. One girl, who seemed to lag behind in the tutorials, ended up eliminating three remedial classes at the local community college! I wish every course that I teach could have the remarkable 'real-world' outcomes of this program."* (Teacher)
